DOMAIN: THE TYPE I COPPER SITE IN NIR PLAYS A CRUCIAL
ELECTRON TRANSFER FROM PSEUDOAZURIN TO THE TYPE II COF
OF NIR, WHICH COMPRISES THE CATALYTIC CENTER OF NIR FC
REDUCTION OF NITRITE.
SIMILARITY: Contains 2 plastocyanin-like domains.

                                                                                    CATALYTIC ACTIVITY: Nitric oxide + H(2)O + ferricytochrome c nitrite + ferrocytochrome c.

COFACTOR: CONTAINS ONE ATOM OF TYPE I COPPER AND ONE ATOM OF COPACTOR.
                                   II COPPER; FAD. TYPE 1 COPPER IS BOUND WITHIN A SINGLE MONOMER, WHILE TYPE 2 COPPER IS HELD BY RESIDUES FROM EACH OF TWO MONOMERS OF THE TRIRITE IS BOUND TO THE TYPE 2 COPPER SITE.

PSEUDOAZURIN IS THE PHYSIOLOGICAL ELECTRON DONOR FOR THE CU-NIR II
PATHWAY: Nitrate assimilation (denitrification) SUBUNIT: Homotrimer (By similarity).

DOMAIN: THE TYPE I COPPER SITE IN NIR PLAYS A CRUCIAL ROLE FOR ELECTRON TRANSFER FROM PSEUDOAZURIN TO THE TYPE II COPPER SITE OF NIR, WHICH COMPRISES THE CATALYTIC CENTER OF NIR FOR THE REDUCTION OF NITRITE.

SIMILARITY: Contains 2 plastocyanin-like domains.

CAUTION: IT IS UNCERTAIN WHETHER MET-1 OR MET-12 IS THE INITIATOR.

"The complete cDNA sequence of bovine coagulation factor V.";
J. Biol. Chem. 267:2971-2978(1992).
-i- FUNCTION: COAGULATION FACTOR V IS A COFACTOR THAT PARTICIPATES
WITH FACTOR XA TO ACTIVATE PROTHROMBIN TO THROMBIN.
-i- SUBUNIT: Factor Va is composed of a heavy chain and a light chain, noncovalently bound. The interaction between the two checked the coadact.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright. ```

and C2 may be involved in membrane binding.

PTM: Thrombin activates factor V proteolytically to cofactor, factor Va (formation of a heavy chain at terminus and a light chain at the C-terminus).

SIMILARITY: Contains 3 F5/8 type A domains.

SIMILARITY: Contains 2 F5/8 type C domains.

SIMILARITY: STRONG, TO COAGULATION FACTOR VIII.

"The identification and characterization of four laccases from the
plant pathogenic fungus Rhizoctonia solani.";
Curr. Genet. 29:395-403(1996).
-!- FUNCTION: LIGNIN DEGRADATION AND DETOXIFICATION OF LIGNIN-DERIVED
PRODUCTS (PROBABLE). THIS ISOZYME SHOWS OPTIMAL ACTIVITY AT PH 6.
-!- CATALYTIC ACTIVITY: 4 benzenediol + O(2) = 4 benzosemiquinone + 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Laccase 1 (Urishiol

CENTERS KNOWN AS TYPE 1 OR BLUE, TYPE 2 OR NORMAL, AND TYPI
3 OR COUPLED BINUCLEAR (BY SIMILARITY).
SUBUNIT: Homodimer.
SUBCELLULAR LOCATION: Secreted.
TISSUE SPECIFICITY: IN MYCELLA, AT A LOWER LEVEL THAN LCC4
SIMILARITY: BELONGS TO THE FAMILY OF MULTICOPPER OXIDASES.
SIMILARITY: Contains 3 plastocyanin-like domains.
